

ENVIRONMENTAL POLICY

James McCaig Farms is committed to ensuring that it and its employees act responsibly towards customers, staff, suppliers and the public with regard to the potential impact that its business operations have on the environment.

We will endeavour to prevent pollution and continually improve our environmental performance by managing our activities in the following areas:

Legislative compliance

Adherence to current legislation is a minimum requirement and we will seek to anticipate future legislation and develop new procedures as required. We will also support organisations that promote environmental protection issues.

Purchasing activities

Source materials and services from businesses who share our concern for the environment and whenever possible purchase products from sustainable sources.

Restoration

We aim to improve the environment for all through our land restoration activities.

Waste management

We seek to reduce waste by improving our process performance and will seek to re-use and recycle materials and resources.

Emissions management

We seek to raise awareness amongst our team of potentially harmful emissions and effluents from our activities and will promote the use of energy efficient systems in our business premises.

James McCaig Farms shall monitor, evaluate and improve its performance whilst promoting environmental awareness to employees. The implementation of our ISO 14001 shall help us to meet our legal obligations and improve. Our management review process shall ensure that the policy remains valid and that our objectives are monitored and progressed.
